Router Settings

This is the basic 1-2-3 for setting up your ADSL router. The setup of your specific router might differ slightly and therefore we would suggest that you keep the router's user manual handy. Ready. Steady. Let's go!

Let's start with the Telephone Cable: Connect one end of the telephone cable to the DSL port on the router and the other end of the cable into the wall socket.

We need power! Connect your power adapter to the power input on the back of the router and then plug the other end of power adapter into the power socket. Switch on your router and computer.

The Ethernet Cable goes where? Connect one end of the Ethernet cable to one of the 4 LAN ports on the back of the router and attach the other end to an Ethernet port on your computer.

Access your router: You will need to now consult your router user manual to find the router's default IP address. Open your web browser (IE, Firefox, etc.) and enter the IP address in the address bar, say a little prayer and press Enter. You will now be asked for a username and password. This should also be available in the router's user manual.

Router settings: As we recommend that you make use of our Connection Manager, the preferable router protocol setting is Bridge mode. Ensure that the ATM PVC settings in your WAN interface are as follow:

Protocol	Bridging
VLAN	Default
VPI/VCI	8/35
Encapsulation	LLC
QoS Class	UBR
PCR/SCR/MBS	4000/4000/10

Should you opt not to make use of the Connection Manager you will need to set up your router in Router Mode. Ensure that the ATM PVC settings in your WAN interface are as follow:

Protocol	PPPoE
VPI/VC	8/35
Encapsulation	LLC
QoS Class	UBR
PCR/SCR/MBS	4000/4000/10
Username	dsl@gconnect.wirelessg.co.za
Password	GConnect

SIM Activation & Provisioning Process

You can provision your current contract SIM onto our APN and use the awesome 3G service. You will still be able to use your SIM for voice calls. This service is only available to Vodacom SIM cards, excluding Nashua Mobile, Autopage Cellular, MTN, Virgin Mobile and Cell C SIM cards.

SIM Provisioning Details

us permission to provision your SIM Card

☐ Accept ☒ Decline

Submit

- 1** Go to www.gconnect.co.za
- 2** Login to your account by entering your username and password.
- 3** Select the SIM Provisioning function from the menu bar.
- 4** Enter the requested details.
- 5** Agree to the T&C's
- 6** Submit your request.
- 7** Our call centre will contact you to confirm and verify your details.

**By making use of our Connection Manager, your
set up of your 3G modem is as easy as:**

Connect the 3G dongle to your laptop; the drivers will automatically load and viola!

However, should you prefer not to make use of the Connection Manager you will have to manually configure your APN settings.

- 1 Open your APN wizard
Ensure that the APN and Authentication settings are as follow:

APN Name:	www.tsamma.com
Username:	GConnect
Password:	GConnect

- 2 Also make sure that your PAP and CHAP settings are enabled under your advanced setup options.

Connecting with Wi-Fi at a Hotspot

1. Turn on Wi-Fi on your device.

2. Select the hotspot you want to connect to.

3. Enter the password if prompted.

4. Wait for the connection to be established.

5. Once connected, you can use the internet on your device.

6. You can also connect other devices to the hotspot.

7. To disconnect, turn off Wi-Fi on your device.

8. You can also forget the hotspot if you no longer want to use it.

9. For more information, see the help page.

10. Thank you for using our service.

You can connect to the Internet at a Hotspot through one of two methods:

Connect wirelessly by using the Wi-Fi radio in your device (laptop/PDA/cellphone) to connect to the Internet via an access point (AP) and router provided at the Hotspot (in most cases the AP/router is not visible).

Connect via an Ethernet cable. The Ethernet cable is often provided in hotel rooms and you can use it to connect your laptop to a Wi-Fi access point and router.

Getting Connected using Windows XP

Enable your Wi-Fi network option on your laptop
Click on the Start button and select Settings, now select the Control Panel.

Once the Control Panel has opened select Network Connections.

Locate your Wireless Network, right click on it and select Enable.

Your Wireless Network should now be enabled and a Wi-Fi icon will be displayed in the system tray.

Right click on the Wi-Fi icon and select View Available Wireless Networks.

Select the WirelessG network and click the Connect button.

You should now be connected to the WirelessG Hotspot.

Open your Internet Browser as if you're connecting to the Internet.

A Hotspot venue landing page will appear where you can login via your G-Connect account.

Getting Connected using Windows Vista

Enable your Wi-Fi network option on your laptop

Click on the Start button and select the Control Panel.

Once the Control Panel has opened select 'View Network Status and Tasks under the Network and Internet option.

Once the Network and Sharing Center screen is displayed, select the Manage Network Connections option under Tasks on the left.

Locate your Wireless Network, right click on it and select Enable.

Your Wireless Network should now be enabled and a Wi-Fi icon will be displayed in the system tray.

Click on the Start button and select Connect to.

Click on the Show Dropdown and select the Wireless option. Select WirelessG and then Connect.

If you receive an alert that states you are accessing an unsecured network, select the Connect Anyway option.

You should now be connected to the WirelessG Hotspot.

Open your Internet Browser as if you're connecting to the Internet.

A Hotspot venue landing page will appear where you can login via your G-Connect account.

Login on Landing Page

Once you have hit the landing page on your web browser you will need to make use of Option 2 – Logon Using A Service Provider. Select G-Connect which will be listed as one of your Local service providers.

Enter your G-Connect Username and Password.

Once the sign up/verification process has been completed successfully, a

Session Information screen will pop up that provides information on the status of your session.

Note: Do not close the session window as this is needed to log you out. If you close the window before logging out, it's likely that your Internet

connection will remain active, resulting in unnecessary bandwidth/Wi-Fi usage (which will deplete your Wi-Fi account balance/run up usage on your Wi-Fi account).

You are now free to surf the Internet as you please!
